DETAILED ACTION

Allowable Subject Matter

1. Claims 10-14 allowed.
2. Claims 4-7 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-3, 8 and 9 rejected under 35 U.S.C. 103(a) as being unpatentable over Mandelman et al. (2002/0085434) in view of Mandelman et al. (6,440,872) further in view of Benedict et al. (6,046,487).

Regarding Claims 1-3, 8 and 9, Mandelman et al. disclose a structure and process for 6F2 trench capacitor DRAM cell with vertical MOSFET and 3F bitline pitch where in claims section it is disclosed a DRAM cell with a deep trench with bottom and sidewalls in the semiconductor substrate, a storage capacitor at the bottom of the deep trench, a gate conductor extending within the deep trench, isolation extending down at least one sidewall of the deep trench. In Claim 33, it is disclosed the liner. Mandelman et al. (2002/0085434) fail to disclose the required liner in the required configuration and the required liner composition. However, Mandelman et al. (6,440,872) disclose a method

Art Unit: 2826

for hybrid DRAM cell utilizing confined strap isolation where in Fig. 7B, layers 30 and 42 are the SiN liner. Furthermore, Benedict et al. disclose a shallow trench isolation with oxide-nitride/oxynitride liner where the required nitride compound liner is disclosed.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required liner configuration and the liner composition in Mandelman et al. ('434) as taught by Mandelman et al. ('872) and Benedict et al. in order to have a DRAM cell structure with increased performance.
